

Erie City Water Authority  
Cost of Service and Rate Design for Years 2015-2019

Erie Water Works (EWW) has contracted with AUS, Inc. to develop water rates for the period 2015-2019. The existing 5-year rate schedule will expire on December 31, 2014, AUS, Inc. was instructed to utilize the American Water Works Association (AWWA) recommended, M-1 Manual as a basis for performing a Cost of Service study to develop a new 5-year rate schedule for the years 2015 – 2019. The new rate schedule is necessary as EWW is required to provide safe and reliable drinking water to its customers and as a result, must recover the costs associated with providing that service. Representative costs that drive water rates include, but are not limited to:

- Compliance with the Safe Drinking Water Act and the Clean Water Act
- Replacement/repair of Plant, Property and Equipment
- Increased operating costs associated with providing service

In order to supply reliable service, the EWW must have the necessary cash flows to meet the demands that the system requires. EWW has determined what monies are needed after developing their 2015 - 2019 Operating Budgets. The operating budgets shown below list the total expenses (excluding non-water operations) that have been projected in order to run the system efficiently and pay any debt that is outstanding. These costs need to be covered by revenue generated by customer charges.

**Chart 1: EWW Water Operating Budget 2015-2019**

	2015	2016	2017	2018	2019
Operating Expenses	\$16,994,752	\$17,648,540	\$18,423,758	\$19,216,215	\$20,042,621
Debt Service Payments	14,268,094	14,524,810	16,451,880	16,464,029	16,465,479
Lease Payment	3,595,017	3,600,000	3,600,000	3,600,000	3,600,000
COLA Pension Liability	50,672	0	0	0	0
Total Expenses	\$34,908,535	\$35,773,350	\$38,475,638	\$39,280,243	\$40,108,100
Miscellaneous Income	<u><u>(\$816,100)</u></u>	<u><u>(\$816,100)</u></u>	<u><u>(\$816,100)</u></u>	<u><u>(\$816,100)</u></u>	<u><u>(\$816,100)</u></u>
Revenue Requirement	<u><u>\$34,092,435</u></u>	<u><u>\$34,957,250</u></u>	<u><u>\$37,659,538</u></u>	<u><u>\$38,464,143</u></u>	<u><u>\$39,292,000</u></u>

These costs are then functionalized and allocated to the various classes of customers through the cost of service study as outlined in the AWWA M-1 Manual. Water rates developed using the principles described in the AWWA M-1 Manual are fair and equitable because the rate setting method balances the anticipated revenues to be generated by each customer class with the anticipated costs that will be incurred to provide service to that class. The study uses those principles and determines how much of the costs included in the annual operating budgets will be paid by each customer class through the rates they pay for service. EWW is responsible for following these guidelines to develop their water rates by its lease with the City of Erie as well as its Water Service Agreements with the Millcreek and Summit Township Water Authorities (MTWA and STWA respectively). In addition, as a result of the conditional settlement of the 2014 arbitration case between EWW, MTWA and STWA, agreed to principals for the calculation of rates were established and adhered to in the drafting of this study.

Generating the customer class allocations is a two-step process. First, budgeted costs for items like operations and maintenance or debt service are allocated to functional categories. The functional categories segregate costs into those costs incurred to provide year-round base level service, the additional costs incurred to provide seasonally higher levels of service on the peak day and the incrementally higher costs incurred to provide extra capacity to meet peak hourly customer class demands. In addition, costs incurred to provide services that do not vary with the quantities of water produced, like the customer service and accounting functions or the provision of private fire service capacity are segregated into distinct functional groups. The next step involves allocating the functional costs to each customer class based on the way the class imposes base, peak day and peak hour demands on the system. This is done by reviewing the volume of water that each class has actually taken from the system on an average day, peak day and peak hourly basis.

The resulting cost of service for each customer class from 2015-2019 is listed in the table below:

**Chart 2: Indicated Cost of Service per Customer Class 2015-2019**

<b>Class of Customer</b>	<b>2015</b>	<b>2016</b>	<b>2017</b>	<b>2018</b>	<b>2019</b>
Domestic	\$17,871,438	\$18,278,180	\$19,679,622	\$20,044,765	\$20,414,132
Commercial	4,626,674	4,730,487	5,093,331	5,182,287	5,272,190
Industrial	4,494,714	4,593,692	4,937,416	5,022,589	5,108,593
Public	2,449,673	2,504,309	2,696,077	2,742,349	2,789,105
Bulk	3,594,652	3,683,833	3,963,115	4,045,916	4,131,101
Private Fire	<u>1,055,284</u>	<u>1,166,746</u>	<u>1,289,981</u>	<u>1,426,233</u>	<u>1,576,876</u>
Total	<u>\$34,092,435</u>	<u>\$34,957,247</u>	<u>\$37,659,542</u>	<u>\$38,464,139</u>	<u>\$39,291,997</u>

Once the costs associated with each customer class are determined, a customer Tariff Rate Design must be performed in order to develop the price EWW will charge their customers. Essentially, the rates for each class are developed by dividing the indicated cost of service by the number of billing units anticipated for the class. Billing units are the number of gallons of water that will be sold to each class along with the number of monthly or quarterly fixed service charges that will be billed over the course of a year. The rate design is not a “one size fits all” approach and many variables must be considered when developing the rates. EWW uses a declining block rate tariff as well as a customer service charge in order to recover the indicated cost of service from each customer class in the system. With the exception of bulk water and private fire class customers, the fixed charges and declining block rate design are the same for all classes. The rates for private fire are fixed service charges derived by dividing the indicated cost of service by the equivalent number fire lines that will be billed each year. Large fire lines are charged more than smaller lines because of the significantly greater loads that large diameter fire lines can exert on the system. Bulk customers pay the same fixed service charges that general metered service customers pay and these charges vary by meter capacity. The balance of the indicated cost of service for the bulk class is recovered through a single volumetric rate per hundred cubic feet of water purchased. Below are the proposed fixed charges per quarter based on meter size for all customers, with the exception of private fire line customers, and the proposed volumetric charges for the years 2015-2019. The year 2014 is included as a point of reference:

**Chart 3: Quarterly Fixed Charges for all Customer Classes (excluding Private Fire Lines)**

Meter Size	<u>2014</u>	<u>2015</u>	<u>2016</u>	<u>2017</u>	<u>2018</u>	<u>2019</u>

In order to properly display the actual cost per quarter to a customer, a customer impact schedule was developed for the typical residential customer that uses water from the EWW system. The hypothetical price per quarter based on a customer using 20 CCF (appro. 15,000 gallons) of water per quarter is as follows:

**Chart 6: Customer Impact Schedule**

	<b><u>2014</u></b>	<b><u>2015</u></b>	<b><u>2016</u></b>	<b><u>2017</u></b>	<b><u>2018</u></b>	<b><u>2019</u></b>
Quarterly Bill	\$83.25	\$92.10	\$94.09	\$100.82	\$102.61	\$104.50
% Increase		10.63%	2.16%	7.15%	1.78%	1.84%
Compound Annual Growth						5.11%

The chart displays the growth in the typical residential customer bill over time. Although the percentage increase does vary from year to year, overall, from 2015-2019, the average customer will see a 5.06% increase over the five years covered by this study. This increase will provide EWW with the appropriate funds to maintain safe and reliable water service while minimizing customer rate impact.

As provided in the water service agreements, MTWA and STWA were invited to participate in the cost of service study. EWW, MTWA and STWA met in person on one occasion and over teleconference on one additional occasion. In those meetings, MTWA and STWA's rate expert submitted suggestions for EWW to consider in deriving the study. All suggestions were considered and incorporated into the study where appropriate.

**Allocation Factor 3: Max Day Demand and Fire Protection (for transmission assets)**

The weighting of the factors is based on the potential demand of general and fire protection service. The bases for the potential demand of general service are the maximum day ratio of 1.50 and the average daily system sendout for year ending 12/31/2013 of 265,523 MGD. The system demand for fire protection is 11,000 Gallons per minute for 10 hours.

	Ratio	Rate of Flow, (GPD)	Weight
Average Day	1.00	17,520,252	0.5329
Maximum Day	<u>0.50</u>	<u>8,760,126</u>	<u>0.2664</u>
Extra Capacity			
Subtotal	<u><u>1.50</u></u>	<u><u>26,280,378</u></u>	<u><u>0.7993</u></u>
Fire Protection		<u><u>6,600,000</u></u>	<u><u>0.2007</u></u>
Total		<u><u>32,880,378</u></u>	<u><u>1.0000</u></u>

Application of the Max Day factors to this weighting produces a factor which produces the allocation factor for Max Day and Fire Protection

Class	Allocation Factor 1	Weighted Allocation (53.28%)	Max Day Allocation	Weighted Allocation (26.64%)	Fire Protection	Fire Protection Allocation (20.07%)	Total

Total	983.4	0.9999	0.3171	1	0.3963	1.0000	0.2866		1	
Factor 4										
		Base Cost	Extra Cap Max Day	Extra Cap Max Hour	Customer Billing	Customer Meters	Customer Services	Public Fire	Private Fire	Check Total
		31.47%		39.63%			19.76%	9.14%	100.00%	

Same as Allocation Factor 4, but this factor excludes bulk from the calculation of the factor.

The weighting of the factors is based on the potential demand of general and fire protection service. The bases for the potential demand of general service are the maximum hour ratio of 2.25 and the average daily system sendout for the year ending 12/31/2014. The system demand for fire protection is 11,000 gallons per minute.

	Ratio	Rate of Flow, (GPM)	Weight
Average Hour	1.00	10,487	0.3031
Maximum Hour Extra Capacity	1.25	13,108	0.3789
<b>Subtotal</b>	<b>2.25</b>	<b>23,595</b>	<b>0.6820</b>
Fire Protection		11,000	0.3180
<b>Total</b>		<b>34,595</b>	<b>1.0000</b>

The maximum hour extra capacity factors in column 5 of the previous page are determined as follows:

Customer Classification (1)	Average Hourly Consumption CCF (2)	Factor* (3)	Maximum Hour Extra Capacity		Allocation Factor (5)
			CCF (4)=(2)X(3)	Per Hour (5)	
Residential	448.4	320.0	1,434.7	0.6009	
Commercial	139.4	272.0	379.1	0.1588	
Industrial	175.4	206.0	361.4	0.1514	
Public	78.0	272.0	212.3	0.0889	
Bulk Water	-	-	-	-	
<b>Total</b>	<b>841.2</b>		<b>2,387.5</b>	<b>1.0000</b>	

\* Ratio of Maximum Hour To Average Hour Minus 1.0.

The public and private fire protection allocation factors in column 7 on the previous page are based on the relative potential demands.

**Allocation Factor 6; Hybrid Allocation for Distribution Assets**

Adhering to the proposed settlement agreement, Original cost of distribution assets are to be allocated by an average of 4, and 4a (now 5)

The allocation for Factor 6 is as follows:

	Base Cost	Extra Cap Max Day	Extra Cap Max Hour	Customer Billing	Customer Meters	Customer Services	Public Fire	Private Fire	Check Total
Factor 4	0.3147		0.3963				0.1976	0.0914	1.0000
Factor 5	0.3005		0.3789				0.2193	0.1013	1.0000
Factor 6	0.3076		0.3876				0.2085	0.0964	1.0000

Erie Water Works  
Calculation of Allocation Factors  
**Allocation Factor 7: Hybrid Allocation for T&D Expense**

Adhering to the proposed settlement agreement, T&D expense is to be allocated by a composite of factors 3, 4, and 4a (now 5) based on the split between T&D mains. Assuming approximately 55% of EWW system is Transmission and approximately 45% is distribution, the allocation for factor 6 is as follows

	Base Cost	Extra Cap Max Day	Extra Cap Max Hour	Customer Billing	Customer Meters	Customer Services	Public Fire	Private Fire	Check Total
Factor 3	0.5288	0.2664					0.14	0.0648	1.0000
